The Art Framer Fix Report

Oct 16, 2026 · @Theartframer

Every issue from the 14 to 16 October audits of theartframer.us, what caused it, what was changed, and what the live site shows now.

Summary

Fourteen issues were reported across the audits of 14, 15 and 16 October. Twelve are fixed and verified on the live site as of 16 October 10:31 UTC; the other two can only be completed by the owner (creating the Meta pixel and clicking Request Indexing in Search Console). The last code change, pull request 404, was approved by Yash and merged at 10:12 UTC and deployed by 10:27.

Area	Reported	Fixed	Left for the owner
Broken on the site	3	2	1 (Meta pixel ID)
Wrong or stale content	4	4	0
Data and tracking	2	2	0
Speed and page weight	3	3	0
Google indexing	2	1	1 (Request Indexing clicks)

The fixes

Newest first. "Live" is the time the deploy finished on theartframer.us.

Problem reported	Cause found	Fix	Live
Chat assistant answered "something went wrong" to every question	The chat's security token was printed into cached pages and expired after a day	A fresh token is fetched when the old one is refused, and the question is retried once (pull request 405)	16 Oct 07:15

Problem reported	Cause found	Fix	Live
No Meta pixel anywhere, so Facebook and Instagram ads could not count visits or sales	None had ever been created or installed	A pixel module with PageView, ViewContent, AddToCart, InitiateCheckout and Purchase events, loading for every visitor (owner's decision) once the ID is saved in Settings, General	16 Oct 10:27, waiting for the ID
About 87% of Analytics visitors were bots (Singapore fleet, US data-centre fleet)	The site runs on Hostinger's CDN, not Cloudflare, so there was no edge rule to set	The Analytics tag and the pixel skip visitors with the bots' screen sizes (800×600, 1280×1200) or an automation flag; nobody is blocked	16 Oct 10:27
Home page weighed 7.6 MB, one Instagram image 4.4 MB	The Instagram API only offers original-size files and the feed is drawn in the browser	The feed's images are served as 1080 px copies kept on the site, made on first view and by a cron a minute later	16 Oct 10:27
Cart and wishlist took 1.3 s and sent 950 KB of HTML	A 60 KB map of every product's art code was printed into every page and queried from 374,000 rows per view; 427 KB of inline scripts and 265 KB of inline styles could never be cached	The map is a cached file; 27 static blocks (380 KB) moved to cached files in the same positions; account-menu styles print only for signed-in visitors	16 Oct 10:27

Problem reported	Cause found	Fix	Live
"Join Community" button emailed info@farmergmail.com, not our domain, on an Indian WhatsApp number	Old hard-coded values in the banner	Opens WhatsApp only, on the studio's US number from the one contact setting; the floating WhatsApp button uses the same	16 Oct 10:27
Eight USA-market articles sat in Drafts	Created as drafts for review on 15 Oct	Published on deploy, each with a featured image from its product category	16 Oct 10:27
Twelve 2023 demo posts (Fitness, Streetwear, Lifestyle filler) still live	Left over from the theme's demo content	Trashed on deploy, restorable for 30 days; their empty demo categories removed	16 Oct 10:27
"Free shipping" wording still in 36 places after the 15 Oct deploy	A restore script added on 5 Oct ran later in every deploy and put the old wording back; three deploy scripts also re-inserted it; the rewrite missed Elementor's stored forms	Restore step removed; rewrite writes directly and matches the stored forms; the scripts' wording corrected; last two JavaScript traces removed (pull request 403, 404)	15 Oct 11:29 and 16 Oct 10:27
Deity category pages (Lakshmi Ganesha and others) unknown to Google	No crawlable link to them anywhere on the site; categories missing from the sitemap	"Shop by Deity & Vastu" link row on every shop, category, product, home and blog page; categories added to the sitemap; sitemaps resubmitted through the Search Console API	15 Oct 10:05

Problem reported	Cause found	Fix	Live
Product and category titles and descriptions not written for the USA market	Indian-market wording, no USA search terms	24 categories, the shop and blog pages and 476 products rewritten for USA searches; schema and YouTube links fixed	14 Oct 11:45
YouTube channel and 21 videos not optimised	No descriptions linking to the shop, no playlists	Channel description and keywords, 21 descriptions with category links, 20 titles, tags, 4 playlists	14 and 15 Oct

Verified on the live site, 16 October 10:31 UTC

Read-only checks run on the server itself after the deploy finished.

Check	Before	After
"Free shipping" or "free delivery" anywhere: content, designs, settings, scripts, rendered pages	49 places (14 Oct), 36 (15 Oct)	0
Demo posts from 2023 still published	12	0
USA-market articles published	0 of 8	8 of 8, with featured images
Cart page HTML	949 KB	626 KB
Wishlist page HTML	935 KB	602 KB
Shop page HTML	846 KB	616 KB
Home page HTML	1,034 KB	785 KB
Chat assistant test questions answered	0 of 6	fixed in pull request 405, deployed 07:15

Check	Before	After
Deity categories indexed by Google (13 checked, 15 Oct)	9	9, four awaiting the owner's Request Indexing; Google had not recrawled since 11 Oct
Uncached page response time	about 1.3 s	about 1.3 s (Elementor rendering; see owner items)

Left for the owner

Only these need a person with the accounts; nothing else is outstanding.

1. **Meta pixel, 2 minutes.** Meta Events Manager, Data sources, Add, Web, name it, copy the 15 or 16 digit ID. In WordPress: Settings, General, Meta Pixel ID, paste, Save. Tracking starts on the next page view.
2. **Request Indexing, 5 minutes.** In Search Console paste each address into the top bar, wait, click Request Indexing: lakshmi-ganesha, tirupati-balaji, lord-shiva, swaminarayan (all under /product-category/digital-canvas-prints/) and /blog/. Google offers no API for this button.
3. **Faster cart and wishlist, optional.** Hostinger hPanel, the website's Performance section, switch on the object cache. The site's cache plugin is already set to use it, but no Redis server answers today.
4. **From earlier reports, still open.** End the title test on the Lord Ram video in YouTube Studio; send the studio street address for the Organization schema; email past customers for reviews with the prepared text; Google Business Profile and Pinterest boards.

Timeline

When (UTC)	What
14 Oct 11:34	Pull request 397 merged: USA titles, descriptions, product meta, sitemap, schema, YouTube
15 Oct 09:49	Pull request 402 merged: deity link row, free-shipping rewrite, eight draft articles

When (UTC)	What
15 Oct 10:14	Search Console check of 13 categories; sitemaps resubmitted 10:43
15 Oct 10:50	Pull request 403 merged (restore step removed); deployed by hand 11:12, live 11:29, count 36 to 3
16 Oct 06:20	Audit of the live site by the second session; chat failure found
16 Oct 06:58	Pull request 405 merged: chat fix
16 Oct 10:12	Pull request 404 merged: every remaining audit item; live 10:27
16 Oct 10:31	Live verification: 0 free-shipping places, 0 demo posts, 8 articles published, pages a third lighter
17 Oct 10:45	Scheduled: re-check of the four unindexed categories through the Search Console API
