The Art Framer USA SEO Report

Oct 15, 2026 · @Theartframer

Summary

All USA-market SEO work that can be done in code is complete: about 80% has been live on theartframer.us and YouTube since 14 Oct, and the remaining 20% was merged at 09:49 UTC on 15 Oct and verified live at 10:10 UTC. The "free shipping" wording that the deploy kept restoring was traced and removed (0 places on 16 Oct), and the 16 Oct audit items (Meta pixel module, bot-free analytics, lighter pages, eight articles published, demo posts removed, WhatsApp button) went live at 10:27 UTC on 16 Oct. After that merge, what is left is owner work only: create the Meta pixel and paste its ID, press Request Indexing on four categories and the blog page, clear one YouTube title lock, supply the studio address, and collect reviews.

Area	State on 15 Oct 2026
Category, shop and page titles, descriptions and intros	Live, verified on the live database
476 product SEO titles and descriptions, no "free shipping"	Live, verified
XML sitemap includes categories, empty categories noindexed, schema	Live, verified
YouTube channel, 21 descriptions, 20 of 21 titles, 4 new playlists	Live
Internal links to the 13 deity categories on every page	Merged 15 Oct 09:49 UTC, deploying
49 remaining "free shipping" claims in page and product text	Merged 15 Oct 09:49 UTC, deploying
Eight USA-market blog articles with FAQ schema	Merged 15 Oct 09:49 UTC, created as drafts on deploy
GA4 purchase tracking	Live, fixed by Yash on 14 Oct

Starting point, 14 Oct

The site was built for a generic "canvas prints and frames" buyer while its real customer is an Indian family in the USA buying deity and Vastu art. The inventory of the live database on 14 Oct found:

Finding	Where
15 product descriptions promised "Free US shipping", written by a deploy script	Product meta
Deity and Vastu categories carried template titles such as "Lord Shiva – Shop Online"	lord-shiva, seven-horses, tirupati-balaji, lord-rama, sikh-art, vaastu-art, swaminarayan, indian-culture
14 of 16 art categories had no intro text	Category pages
Product categories were excluded from the XML sitemap	Rank Math setting
50 of 97 categories were empty yet indexable	Frame sizes, colours, placeholders
Product SEO titles omitted "Canvas Wall Art"	476 products
YouTube channel keywords targeted India ("wall art india", "canvas prints india") and one video promised free delivery	Channel and video U_a3R44j_S4
Search Console, 16 months: 276 clicks, 20,233 impressions, average position 22; no deity or Vastu query in the top 200	Whole site

Website changes live since 14 Oct

Deployed through pull request 397, merged 14 Oct 11:34 UTC, and verified by a read-only inventory of the live database after the deploy.

Change	Before	After
Product descriptions saying free shipping	15	0
Seven Horses category title	Seven Horses – Shop Online	7 Horses Painting as per Vastu for Living Room & Office
Lord Shiva category title	Lord Shiva – Shop Online	Lord Shiva Painting for Home | Mahadev Canvas Wall Art
Tirupati Balaji category title	Tirupati Balaji – Shop Online	Tirupati Balaji Painting for Home | Venkateswara Wall Art
21 more categories	Template titles, no intros	USA-market titles, descriptions and intro text
Shop page title	Shop Canvas Prints, Wall Art & Picture Frames	Shop Hindu God Paintings, Vastu Art & Canvas Prints
Blog hub page	No title or description	Vastu & Hindu Wall Art Guides for US Homes
Product SEO titles	Blue Kintsugi Bird Profile | The Art Framer	Blue Kintsugi Bird Profile Canvas Wall Art | The Art Framer
Deity product descriptions	Generic canvas text	e.g. "Radha Krishna Moonlit Melody: Radha Krishna canvas art for the living room, bedroom or pooja room. Ready to hang. Ships across the USA."
Product categories in the XML sitemap	Off	On
Empty categories	Indexable	Noindex
Organization schema	Facebook, Instagram; name "The ART FRAMER"	YouTube added; name "The Art Framer"

The owner-approved titles for the ten most-shown pages, added the same day by Yash, were kept intact, and hand-written copy was never overwritten.

YouTube changes live

Applied on 14 and 15 Oct from the SB environment with a full backup of every original value saved first, so any item can be restored.

Item	State
Channel description	Rewritten around Hindu god paintings and Vastu art for Indian-American homes, Delaware studio, shipped across the USA
Channel keywords	USA keyword set; India-market terms removed
21 video descriptions	Keyword-led hook, shipping line with cost at checkout, meaning copy, link to the video's own category page, three to five hashtags; "free delivery" line removed
20 of 21 video titles	Search term first, under 100 characters
Lord Ram video title (wJGiXVAtndk)	Refused by YouTube with "Precondition check failed": a title test or lock in YouTube Studio; its description and tags were accepted
Tags	8 to 11 specific tags per video plus 8 common ones
Playlists	Created: Seven Horses Vastu Paintings (5), Radha Krishna Wall Art (6), Lord Rama (1), Indian Wall Art for US Homes (2); 5 videos added to Lord Krishna

Pull request 402: merged 15 Oct

Pull request 402 holds the second batch. Yash-devl approved it and the owner merged it at 09:49 UTC on 15 Oct; the deploy takes about 15 minutes.

Change	What it does	Verified by
"Shop by Deity & Vastu" link row	Links to the 13 devotional and Vastu categories on the shop page, every category page, all 476 product pages, the home page and every post	Rendered against test data: 11 links, current category marked, missing term skipped, printed once per page
Free-shipping cleanup on every deploy	Rewrites the 49 remaining claims: the product FAQ on 14 products, home page badges, shipping, about, contact and legal pages; the step used to run only behind a ticked box	Exact sentences measured on the live site on 15 Oct
Eight blog articles as drafts	7 horses Vastu direction, pooja room wall ideas, which deity for which room, Ganesha at the entrance, Diwali gift guide, Radha Krishna for the bedroom, canvas size guide, Griha Pravesh gifts; 594 to 744 words each, 2 to 9 category links each, Rank Math meta set	Checked for length, links and wording
FAQ schema on posts	FAQPage structured data from each article's three question-and-answer pairs, for FAQ rich results	Parsed 3 pairs from all 8 articles
Review-request email, outreach list, two owner decisions	Written into docs/seo-plan-usa.md section 9	

Search Console findings

The deity category pages were invisible to Google because nothing on the site linked to them, which pull request 402 fixes. URL Inspection on 15 Oct, a day after the new titles went live:

Category	Verdict	Referring pages
seven-horses	URL is on Google	some
lord-shiva	Crawled, currently not indexed; no referring sitemap	a faceted /shop/ filter URL and pichwai-art
lakshmi-ganesha	URL is unknown to Google	none

The header menu lists top-level categories only and the sidebar hides the deity pages behind a "+" that opens in the browser, which crawlers do not click. The sitemap was resubmitted on 15 Oct and indexing was requested by hand for the main deity categories.

Over the previous 16 months the site earned 276 clicks from 20,233 impressions. Two blog posts about wall decor trends and cleaning canvas brought most impressions, and the home page took 60 percent of clicks. Buddha terms were the only product intent showing, at positions 24 to 37. No "radha krishna painting", "7 horses painting" or "ganesha painting" query reached the site at all, which is the gap the category titles, the link row and the eight articles are written to close.

Owner actions remaining

Each item below needs a person with a login; none can be done from code.

Action	Where	Notes
Approve and merge pull request 402	GitHub	Done, 15 Oct 09:49 UTC
Read and publish the eight draft articles	WordPress, Posts, Drafts	Add a featured image from the matching collection to each
Finish the indexing requests for the deity categories	Search Console, URL Inspection	Lakshmi Ganesha and any others not yet requested

Action	Where	Notes
End the title test on the Lord Ram video	YouTube Studio	Then one command re-applies the planned title
Supply the studio street address, city, state and ZIP	Message to Claude	Goes into the Organization schema the same hour; not a secret
Email past customers for reviews	Email	Text ready in docs/seo-plan-usa.md section 9; star ratings need reviews
Google Business Profile listing with the same name, address and phone as the site	Google	Supports local and entity signals
Pinterest boards per deity category; community newsletter and gift-guide outreach	Pinterest, email	Steps listed in section 9 of the plan

Two decisions left open on purpose. The home page has no H1 since the owner removed it in July 2026; a visually hidden H1 would help and is a one-line change if agreed. The long product names, which repeat "Canvas Wall Art 3×4 Feet – Floating Frame – Premium Digital Canvas Print", would be better shortened, but other tooling reads sizes from them, so that is a planned change rather than a quick one.

What to expect and when to measure

Google needs two to six weeks to recrawl, reindex and rerank changed pages, so the work can be complete while traffic still looks unchanged for a month. The baseline to beat is 276 clicks and 20,233 impressions over the 16 months to 13 Oct 2026, with no deity or Vastu query in the top 200.

The first measurement is due on 12 Nov 2026: pull Search Console queries and pages again, compare clicks, impressions and positions for the deity terms against the baseline, and check that all 13 deity categories report "URL is on Google". A second read in mid-December covers the Diwali gifting season and the first weeks of the published articles.

Sources: live-database inventories from the Run Diagnostic workflow (runs 98, 101 and 105), Search Console URL Inspection screenshots and the Search Console API pull of 14 Oct, YouTube Data API reads before and after each apply, and pull requests 397 and 402 in the postero-child repository.

Live verification after the second deploy, 15 Oct 10:10 UTC

The deploy for pull request 402 succeeded at 10:05 UTC, and a read-only check run on the server itself confirms the link row, the sitemap and the eight drafts are delivered. One check failed: 36 places in the database still said "free shipping" or "free delivery", down from 49. The deploy itself was putting the words back. A restore script added on 5 Oct (after the rewrite's earlier save method damaged page markup) ran later in every deploy and restored each page and Elementor design from its pre-rewrite backup, and three deploy scripts carried the sentences and re-applied them. Pull request 403 removes the restore step, makes the rewrite write directly and match the text as Elementor stores it, clears Elementor's render caches and fixes the wording in the scripts. It was merged at 10:50 UTC and, because its files sit in the deploy's ignored paths, deployed by hand at 11:12 UTC. The live count then fell from 36 to 3, none of them content: a JavaScript literal in the ZIP checker, a JavaScript comment in the features popup, and a backup row. Pull request 404 removes the two script places; after it deploys the count should be 0.

Check	Result
Deity link module loaded, 13 categories resolved	Yes, all 13 with live URLs
"Shop by Deity & Vastu" row on the Lakshmi Ganesha category page	Present, 88 deity category links in the page
Row on the shop page	Present, 48 links
Row on the home page	Present, 40 links
Row on a Radha Krishna product page	Present, 43 links
"Free shipping" wording on those four pages	None
Sitemap index lists the product-category sitemap	Yes
Category sitemap lists lakshmi-ganesha and seven-horses	Yes, both

Check	Result
Eight articles created as drafts	Yes, posts 35024 to 35031, all in Drafts
"Free shipping" wording anywhere in the database	0 places on 16 Oct 10:31 UTC (49 on 14 Oct, 36 after the first deploy, 3 after pull request 403). Content, products, designs, scripts and every rendered page clean
16 Oct audit fixes (pull request 404, deployed 10:27 UTC)	Live: 8 articles published with featured images; 12 demo posts trashed (0 posts older than 2026 remain); Meta pixel module waiting for the ID; bot filter on the GA4 tag; Instagram images shrunk; WhatsApp buttons on the US number
Page weight after the fixes (HTML bytes, same pages as the 16 Oct profile)	Cart 949 KB to 626 KB; wishlist 935 KB to 602 KB; shop 846 KB to 616 KB; home 1,034 KB to 785 KB. Uncached response time unchanged at about 1.3 s (Elementor rendering; a Redis object cache in Hostinger's hPanel is the next step)

Search Console on the 13 deity and Vastu categories, 15 Oct 10:14 UTC

Read-only URL Inspection from the SB session, before Google had recrawled anything after the deploy (latest crawl 11 Oct). Nine of thirteen are indexed and the canonical matches on all thirteen.

Category	Coverage	Last crawl	In sitemap, per Google
hindu-deities	Submitted and indexed	9 Oct	yes
radha-krishna	Submitted and indexed	11 Oct	no
lakshmi-ganesha	Discovered, currently not indexed	never	yes
lord-shiva	Crawled, currently not indexed	9 Jul	no
seven-horses	Submitted and indexed	6 Oct	yes
vaastu-art	Submitted and indexed	3 Oct	yes
tirupati-balaji	Discovered, currently not indexed	never	yes

Category	Coverage	Last crawl	In sitemap, per Google
lord-rama	Submitted and indexed	3 Oct	yes
buddha	Submitted and indexed	28 Sep	yes
sikh-art	Submitted and indexed	23 Sep	yes
swaminarayan	Crawled, currently not indexed	24 May	no
pichwai-art	Submitted and indexed	2 Oct	yes
indian-culture	Submitted and indexed	4 Oct	no

The four that are not indexed need the owner to press Request Indexing in Search Console: Lakshmi Ganesha, Tirupati Balaji, Lord Shiva and Swaminarayan. What Search Console shows for a page is Google's last memory of it, which for these pages dates from before the changes. It updates only after Google crawls the page again, which the sitemap, the new internal links and a manual "Request indexing" each prompt. Expect the verdicts to change over the next one to four weeks.
